Please complete the following questions about your project progress each week and save in the GitHub folder, naming it "Weekly Check-Ins".

Keep your response concise, 1-2 sentences max per question. We will go over them in the zoom check-in:

1a. Weekly mentor meeting attendance (for missing members, provide reason):

All members were able to attend.

1b. Was there a good discussion/Did you get your questions answered/requests responded to?

Yes, all of our questions were answered.

1c. Any issues with the mentor communication?

No.

2a. Team working meeting attendance (for missing members, provide reason):

All members were able to attend.

2b. Was there a discussion on the work?

Yes. We talked about what was the goal for our project (i.e. what work we wanted to accomplish) and what each member was gonna do in the following week.

2c. Did you have a project management component? Did you make progress? Does everyone know what to do next?

Yes, each member contributed equally to the project during the last week by communicating through our group chat. We also talked after the weekly mentor meeting to make sure everyone understood what we should be doing next week.

2d. Any challenges or roadblocks?

1) We were trying to review the code from the previous group to help us understand the assignment better, but we were unable to find related information on this code.

3. Any questions/feedback?

Not yet since we are at the beginning of our project.

First meetings only:

  1. Is the project goal/plan over the semester clear?

Yes.

  2. What's your current knowledge level on this project's theme on a scale of 1-5? (1 being completely new to the topic)

2-3 (we are all quite new to the approaches we are gonna be using for the project, but we have some level of understanding for the general idea)

  3. Have you selected a caption? How are you discussing who's learning or working on the different aspects and technologies of the project?

We have a group chat for our discussion so that each member could contribute and help with the difficulties we encountered. If all members were confused, we would reach out to the mentor/course instructor for help.

  4. Have you set up the Github repository yet?

Yes

  5. Are the mentors engaged and responsive?

Yes
